AmWind 600/900 white

Article code: SBNB582001

General information

**Product group**
- Synthetic Belts

**Belt construction**

**Fabrication**
- Hot splicing is always preferable. Glueing can only be done when the belt is exposed to normal temperature and the humidity is not excessive.
- For the working method, consult the splice information and the equipment literature. Apply the recommended splice as indicated in the separate information.

**Additional information**
- This sheet contains typical values, which apply to a temperature of approx. 20 °C (68 °F) and 50% relative humidity, unless otherwise stated, individual data may differ.
- We recommend to keep the belt tension to a practical working minimum to maximize the service life of the belt and machine parts.
- Do not go below the initial elongation. Install the belt and tension until running perfectly under the full belt load.
- Always protect belts from sunlight/UV-radiation, avoid temperatures below 10°C and above 40°C, dust and dirt. Store belts in a cool and dry place and if possible in their original packaging.
- For details consult 'Storage and handling instructions' or contact our specialist.
