PRODUCT RAPPLON®

PROCESS

Transport and Sortation on Logistics Sites

## Situation

### Downtime due to maintenance and replacement.

Distribution facilities have many long and narrow belts installed in Roller Drive; a quick and easy replacement is requested to reduce downtime.

### Solution

### RAPPLON® QuickSplice Belts allow replacement within minutes.

QuickSplice splicing technology allows you to replace belts yourself on site quickly and whenever you need it. These belts have excellent dimensional stability, ensuring efficiency and consistency over a long service life. Thanks to its high E-modulus fabric, wrapping of the pulleys by frayed yarns and cords (as seen with competitors) is not an issue.

Roller Drive Flat Belts:

- FBUU054567 UU A80.45 RRQ (heavy-duty roller drive belt)
- **FBUU054568 UU E15.16 RFQ**
- FBUU054765 UU E15.20 RFQ
- FBUU054762 UU E15.30 RFQ
- FBUU054763 UU E18.20 RRQ
- FBUU054764 UU E18.30 RRQ

# Benefit & Advantages

- Safe and fast joining with QuickSplice tools
- Extended service life and highly efficient with abrasion and wear resistance
- Low energy consumption due to extremely flexible material and great performance on all equipment
- No continuous elongation; dimensionally stable
- Just fit-and-forget; no re-tensioning is necessary
- Greatest possible efficiency; anti-static feature prevents accumulation of dust
