**APPLICATION**

Berry Conveyance

# Reduce Downtime uni MPB C POM MD

**Challenge**

A major juice manufacturer was facing extensive downtime and expensive recalls. The use of a competitor's plastic modular belt led to approximately \$10K in downtime per month. In addition to the high cost of downtime and maintenance, the belt was difficult to clean and broken modules were contaminating the finished product, causing consumer safety concerns and/or expensive recalls.

**Solution**

Hearing their challenges, our solution was uni's MPB C POM MD belt. This belt is strong enough to support heavy loads without breakage. Our Single Link® feature reduces bacteria growth and is easily cleaned.

This solution has been in place for over a year with zero issues. This means that the juice manufacturer has an annual savings of \$120K due to no down time, no wasted product or expensive recalls, and less water usage from our easy to clean belt.

**Benefits**

- Reduced downtime – reducing the total cost of ownership and improving bottom line
- Single Link® feature reduces bacteria growth and prevents knife tips from getting stuck when using for cutting
- Holds valid NSF/USDA approvals
- Styles: closed or open surfaces; roller or rubber top
