

ZipLink® : the revolutionary solution for the corrugated industry

INDUSTRY

Corrugated

PRODUCT

Ziplink®

PROCESS

Corrugator machine
Bridge riser belts

Situation

Bridge riser belts are essential components of the corrugator machine, facilitating the smooth movement of corrugated cardboard through various processing stages and different sections of the machine, such as the corrugating rolls and the drying section.

This application is sensitive to abrasion, high temperatures, and humidity. The standard belts are connected using mechanical fasteners that can potentially cause damage to the corrugated board.

Solution

Ziplink® belts are designed to withstand abrasion, high temperatures and tension, ensuring efficient production and quality output in the corrugation process. With the use of Ziplink®, customers get the benefits of easy and fast joining technology with combination of wear resistant material, which is also resistant to humidity.

Benefit & Advantages

- **Impact and wear resistance**
- Seamless joint, improved **product safety**
- Increased production time: only a few minutes for belt changes
- Less downtime, reduced maintenance costs
- Easy-to install: fewer people needed for installation with only basic training, without special tools
- Fewer safety issues due to the absence of hot splice and heavy equipment.
