

BELTING SOLUTIONS FOR TEXTILES!

Ammeraal Beltech at ITMA

Ammeraal Beltech are showing their extensive range of conveyor belting solutions for the textile and garment technology industry at ITMA in Barcelona, 20-26 June, on Stand A104 in Hall 7. Their globally-available products are recognised enablers for all the different processes involved in handling textiles -- from fibre preparation to textile printing, garment fusing, and lamination -- and are today to be found in almost every type of machine involved in textile production.

Matching industry innovation

Today's textile processing industry is focussed very much on innovation in every end-use sector, from anti-bacterial surgical gowns to breathable fabrics for athletes and printed t-shirts. Ammeraal Beltech contribute to uniform, high-output, cost-effective results across the field with up-to-the-minute and wide-ranging belting solutions. Their process and conveyor belts -- flat belts, modular belts, endless woven belts, timing belts, as well as specially-engineered belts -- are a popular choice in the nonwovens sector in particular, where their smooth, antistatic surfaces and lateral stability properties are much appreciated. For yarn-spinning and finishing applications, the RAPPLON® tangential belts and spindle tapes contribute high-performance results in terms of maximum output, extended lifetime and uniform yarn quality.

One-Stop Belt Shop

Offering good chemical and ageing resistance for an extended service life, Ammeraal Beltech's products are available from the company's One-Stop Belt Shop -- which features a network of 25 operating companies around the world, with supporting service centres and distributors in 150 countries.

The company's focussed textile industry technical team will be on hand at ITMA to discuss stand visitors' needs and wants, and to demonstrate their products in action.
