uni-chains®
Modular Spiral Belts

Best in Class for the Food Industry
Improved air circulation for an efficient consistent production

For cooling, chilling, freezing, proofing, steaming, pasteurizing or just inclined or declined conveying, long stretches of belt conveyors and thus production space are necessary. Spiral belt conveyors may be used to concentrate these applications in one location.

Ammeraal Beltech manufactures uni-chains® belts for spiral conveyors, offering improvements to your food safety, product quality, process efficiency, energy efficiency, and lower maintenance costs. Thorough understanding of industry needs and built-up valuable knowledge of spiral applications, spiral systems and spiral belts ensure that Ammeraal Beltech can make a real difference.

Ammeraal Beltech sets new standards with uni-chains® modular spiral belts and its belting technology. The unique patented belt designs provide extremely strong belts and enable the highest hygiene level to be obtained. uni-chains® all-plastic modular spiral belts operate for many years and often exceed the life time of steel belts.

uni-chains® spiral belts are used to obtain the lowest cost of system ownership and maximum process efficiency. Good air circulation results in fast heat transfer rates and subsequent process energy savings. The all-plastic construction means low belt weight resulting in driving energy cost savings. Non-stick food safe belt materials, kind carrying surface profiles, and uniform heat transfer across the belt width all result in more consistent products.
### Application

<table>
<thead>
<tr>
<th>Spiral coolers</th>
<th>Spiral freezers</th>

### Trouble-free Running
- Lower Cost of Ownership

### Seeing is believing
- Ammeraal Beltech’s Spiral Team can present references showing belts that have been running trouble-free for many years in numerous applications world-wide.
- The Team will help in achieving maximum performance and ensuring that belts run exactly as intended and calculated. This includes on site measurement of belt tension during system commissioning.
- Procurement is backed up by a written guarantee. This warranty gives the assurance that if a problem arises, this will be handled to your satisfaction.

### Full support
- The Spiral Team will guide you through every project step and provide the best feasibility advice. This begins with an assessment of the application and, if necessary, a visit on site. Once the Team has good confidence in the proper outcome, you will receive an offer accompanied by thorough technical advice and calculations.
- The Team will support during belt installation, reviewing all aspects of the belt operation from design to start-up to ensure that the belt runs properly. With this on site support nothing is left to a chance!

### Reliable retrofit
- Ammeraal Beltech knows the value and importance of quick and precise retrofits. The Spiral Team will come to you for a thorough review of all aspects of the retrofitting and provide a written report.
- Ammeraal Beltech is singly responsible for the retrofit from start to finish or can recommend a well-known partner in case of major changes in the conveyor.

Visit [www.unichains.com](http://www.unichains.com) or get in touch with one of the local sales centres for more details.
**Less Product Waste**

Smart open area spiral belts allow good – even vertical – airflows and result in best heat transfer rates for uniform processing of products, better product consistency and reduced waste. The air circulation in open belts with low surface contact allows for evaporation of condensation moisture.

**Food Safety**

Metal belts running over support rails cause black wear debris contaminating the food products. uni modular spiral belts are completely made of plastic, which eliminates the chance of product contamination.

**Food Grade and Hygiene**

A uni modular spiral belt is easy to clean due to the improved hygienic design of the belt links. Belt designs, colours and food grade materials support your HACCP program. The curved surface of uni Flex ASB-CS forms a perfect circle which can be scraped. Food grade modular belts comply to EC1935/2004, EU 10/2001, and FDA.

**Improved Process**

Consistent heat transfer can be obtained across the full width of these advanced spiral belts ensuring the best process results. Non-stick polymer belt surfaces ensure gentle product handling and damage free exit transfers.

**Lower Power Consumption**

Compared to a steel belt, an all-plastic uni spiral belt will reduce belt weight and friction and consequently energy consumption. The open belt structure allows for easy air circulation and consequently reduced energy usage in vertical airflow machines.

**Operational Safety**

uni modular belts are strong and offer more operational safety. Using a 1” pitch belt instead of a 2” pitch allows for smaller transfers. Flexible nylon pins instead of stiff steel pins increase the performance of the belt.

**Low Maintenance**

The spiral belt is engineered to reduce crumb retention and to be easy to clean. Additionally, lower friction together with lower tension result in less wear of support strips and cage bars. This means a longer life and a decrease of necessary maintenance.
Ammeraal Beltech has assembled a dedicated team of spiral conveyor experts that are available to assist on even the most complex of projects. Our Spiral Team experts work alongside our local sales and service personnel.
