Ultrasync Belts and Plastic Pulleys for Positive Drive

Innovation and Service in Belting
Ammeraal Beltech is a leading manufacturer of process and conveyor belting with an established reputation for developing innovative belting solutions.

One of these solutions is the Ultrasync belt. In an Ultrasync belt the best properties of a standard synthetic conveyor belt and a positive drive belt are combined. The Ultrasync belt range is especially suitable for applications in industries like the food industry, hygiene industry, tyre building and in packaging and assembly processes.

Benefits of Ultrasync belts are:

- Exact positioning
- Perfect synchronous conveying
- No slippage in start-stop operations
- Belts up to 1000 mm wide
- Bidirectional conveying
- Improved belt tracking
- Low belt tension
- Simple and light conveyor construction

Ultrasync belts are driven by T10 toothed pulleys that match the T10 toothed bottom side of the belt. Apart from pulleys manufactured in aluminium, (cast)steel or stainless steel Ammeraal Beltech offers Ultrasync pulleys manufactured from HDPE. This light synthetic material reduce the start-stop torque and are resistant to the cleaning and disinfecting agents that are used in the food industry. Numerous pulley executions are possible, just ask us for a quote.

**Ultrasync Plastic Pulleys**

**Advantages of Ultrasync plastic pulleys**

- 100% non-marking material
- Resistance to cleaning agents which are used in the food industry
- Foodgrade (FDA, EC)
- Standard relief groove when supplied with flanges
- Locking device with brass inserts and stainless steel bolt
- Lightweight / start-up torque
- Competitive pricing
- Quick delivery
Ultrasync Belts

Typical applications

Packaging and assembly
- Exact positioning
- Synchronised conveying
- Slip free start-stop operation

Food industry
- Compliance with Food Grade standards EC 1935/2004, EU 10/2011 and FDA
- Non-stick profiles
- Light blue color for detection of contamination
- Amseal edge protection possible
- Closed tooth side, no coil-nose

Hygiene paper production
- Low friction fabric for vacuum lanes
- High speeds - up to 450 m/min
- Silicone covers for optimum grip and non stick properties
- High tensile strength even with vacuum holes due to fabric base

Tyre building
- Synchronised and precise positioning
- High release properties
- Optimum grip covers for positioning
- Less downtime – splicing on site

Fabrication feasibilities

Ultrasync Belts are fabricated using the same methods as for synthetic conveyor belts and timing belts. These include splicing or belt fasteners (also onsite), perforations, grinding, cleats, sidewalls, V-guides, Amseal belt edges and cover materials.
