uni ACB

Next generation belt for medium duty vehicle and people conveying
uni ACB
– the next level in automotive belting

Ammeraal Beltech helps you do MORE with LESS.

Ammeraal Beltech was already a leader in Automotive belting for over decade when it introduced the groundbreaking uni CSB belt back in 2012, which further strengthened its automotive innovation credentials.

Dual Compound Technology (DCT) allowed our uni CSB belt to combine different materials to maximize customer benefits such as higher allowable pull range and providing electrical conductivity.

Now, Ammeraal Beltech has used this same proven DC Technology, together with improved engineering to come up a new automotive belt series that is truly class leading.

Introducing an all new Advanced Concept Belt series, the uni ACB.

Features:
- a more compact 40 mm pitch
- radical new design enhances pull range
- strength rated at 80,000 N/m
- proven Ammeraal Beltech Dual Compound Technology

Benefits:
- Increased wear resistance
- Improved electrical conductivity
- Lower energy consumption
- Allows for longer conveyor lengths (and less transfers)
- Higher load capacity
- Lower construction heights (less pit depth)
- Optional flame retardant execution
- Improved ergonomics and worker safety

The new uni ACB! The 40 mm pitch modular belt that can do what other 1.5 to 2.25 in pitch belts can do... and more!

Contact us to find out more about the exciting, new uni ACB and do more with less.
Stronger belts at lower costs

- 40 mm pitch means low construction heights and less pit depth required.
- Lower belt weight allows for a higher load, a longer center to center distance and less transfers.
- Lower belt weight results in less needed drive power, smaller drive motors and smaller gearboxes.
- Electrically conductive properties are added to the belt through cost efficient inserts without compromising belt pull as usual.
- The belt can be executed in a combination of B1* fire rating and electrically conductive properties.

Lower total cost of ownership

- Long belt life due to high contact area and innovative belt bottom design.
- Less bottom wear at high surface pressure due to wear-resistant wheelplate inserts.
- Longer conveyors and higher loads on one conveyor.
- Low maintenance costs due to extremely low maintenance requirement.
- Lower belt weight results in lower energy consumption.

Safe Walk

- Appropriate grip in dry and wet conditions.
- Low belt profile to avoid injuries and foot discomfort.
- Colored edges to visualize moving floors.

*B1: Fire rated material (Flammability Class B1)

Base link open + electrical conductive insert = EC link

Base link closed + WP wear part insert = Wheel Plate

Dual Compound Technology (DCT):
Combining the best properties of two materials in one belt link
